

June 7, 2007: Sanchez Supports Stem Cell Research Enhancement Act of 2007

Statement in Support of S.5

Representative Loretta Sanchez

June 7, 2007

Madam Speaker, I rise to offer my support for passage of S. 5, the Stem Cell Research Enhancement Act of 2007.

The scientific community has demonstrated the great potential for stem cell research. Advancements are being made through the National Institute of Health, private sector biotechnology, and research universities.

Some of that progress has been made with stem cells from other than embryonic sources, but the Congress should not be in the business of shackling scientific discovery and should pass this legislation to open up the potential that embryonic stem cell research has to offer.

In Orange County, California, the University of California at Irvine, Reeve Research Center is home to spectacular research that is utilizing embryonic stem cells to develop treatments for spinal-cord injuries and neurological disorders.

California has already led the way for responsible government support of stem cell research. Now is the time for the Federal government to do so as well.

I urge my colleagues to support the Stem Cell Research Enhancement Act. Thank you.
